Summary

Computer Science graduate specializing in **Java backend development** and **Spring Boot**, with a strong focus on system architecture and computational efficiency. Experienced in building production-ready **REST APIs** backed by **PostgreSQL**, translating complex business requirements into scalable software solutions. Backed by rigorous analytical problem-solving skills, demonstrated through solving **100+ Data Structures & Algorithms problems in C++** with an emphasis on optimal memory layouts and underlying system mechanics.

Education

Bennett University — **Greater Noida, India**
Bachelor of Technology in Computer Science and Engineering; CGPA: ***7.75/10.0*** — *August 2022 – June 2026*

Technical Skills

Programming Languages: **Java**, **C++**, Python, SQL, HTML/CSS, JavaScript(Decent)
Backend & Frameworks: **Spring Boot**, **RESTful API Design**, MVC Architecture
Databases: **PostgreSQL**
Core CS: Data Structures & Algorithms, Object-Oriented Design (OOD), System Internals
Tools & Technologies: **Git**, **GitHub**, Postman, IntelliJ IDEA, VS Code

Projects

ZenFlow (Expense Tracker) | ***Java***, *Spring Boot, PostgreSQL, REST API* — *On-Going (**GitHub Link**)*

- Architecting a Spring Boot backend for an AI-driven personal finance tracker, automating daily cash-flow analysis for high-frequency digital (UPI) spenders to eliminate the friction of manual logging.
- Engineering granular transaction-categorization models in **PostgreSQL**, integrating AI logic to generate personalized weekly reports that proactively identify spending patterns and recommend actionable cost reductions.
- Along with building secure, low-latency RESTful APIs with structured exception handling, ensuring reliable data persistence while maintaining rigorous version control via daily GitHub commits.

Console Expense Tracker | ***Java***, *OOP, Collections Framework* — *2026 (**GitHub Link**)*

- Architected a Java console-based expense manager utilizing strict Object-Oriented principles, enforcing encapsulation and separation of concerns between data access and core business logic layers.
- Leveraged the Java Collections Framework (ArrayList) to implement robust CRUD operations, dynamic category-wise aggregations, and custom search filters, optimizing data retrieval without external dependencies.

Problem Solving

LeetCode – Data Structures and Algorithms — **Jan 2026 – Present**
Online Platform

- Mastered core algorithmic patterns spanning **Arrays & Hashing**, **Two Pointers**, **Stack**, **Sliding Window**, **Binary Search**, and **Linked Lists** to solve complex computational problems.
- Solved **100+ problems in C++** with a rigorous focus on space-time complexity trade-offs, optimal memory allocation, and efficient data manipulation.
